- Multi directional wheels with locks
- Electric back rest
- Choice of colours for the vinyl mattress
- Minimum table height starting at 16 inches
- Extra electrical pedals

Control bar for height adjustment

10,000N electric actuator

Econo Osteo tables are entirely designed and fabricated in Quebec.

Features of interest

The Econo Osteo KML table was developed with the help of osteopaths Katie, Melanie and Louise!

The table is fabricated from welded steel tubing and is powder painted to a beautiful mushroom beige colour. The mattress is specially made for osteopathic treatments and is made in two parts, with a narrow section at the feet of the table. The front portion of the table also becomes a back rest and is actuated with a powerful block-O-Lift gas spring. The back rest can be adjusted from 0° - 70°. The base of the mattress is made out of imported 9 ply Russian plywood, and covered with two inch (2") thick high quality foam and then finished with a hospital grade black vinyl. The table is equipped with a head rest 4" x 24" for osteopathy.

The table rises from 20" to 36" with a control bar that is placed on either side of the table to eliminate foot pedals. The table can lift 350 lbs with a rapid electrical actuator rated at 10,000N and operates on 110 volts.
